

Dear Ms Henney,

6665 '99 DEC -6 12:48  
I strongly support labeling on genetically altered food. FDA stats that it is safe. Is this the same FDA that approved and took off the market, DDT, phen, oralflex which killed 143 people. What about prozac it has 574 side effects, and since eli lily makes 200 million a month why would you want to take it off the market. Please protect the AMERICAN people. AMA say 100,000 people die each year through drug reactions, and 1 million will be hospitalized due to drug reactions.

Stop growth hormones, antibiotics, pesticides, parasites in all animal products. listen to Harvard when they say dairy causes prostate and kidney cancer.

Support natural approach to cancer and disease.

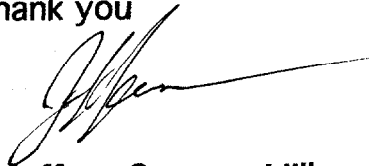

Marijuana is a plant not a drug, it should be legal.

Stop all pesticides, 5 billion tons are dumped annually, it has proven to causes cancer and disease.

Stop animal testing

Educate prevention, not detection.

Thank you

Dear Commissioner Henney

Thank you for taking the time to read my letter, I know you are busy. You are doing a good job in our wonderful country. I **stand** proud as a citizen of the UNITED STATES OF AMERICAN. I enjoy to study Lincoln, Jefferson, Edison, **Franklin**. The reason I am writing is you is that myself and thousands of people feel these topics should be addressed.

we have two ways of treating disease and cancer, a conventional way of treating people through, drugs, surgery, radiation, in which billions of dollars are made and millions of lives are killed. The other side of the coin is alternative medicine or natural health which follow Hippocrates oath of "let food be your medicine and medicine be your food". There are people who have had cancer and disease and cured it in a natural approach. Why doesn't the **NIH**, and the AMA educate the **AMERICAN** people about this non conventional way. I am sorry to say its about money, Pharmaceutical **companies**, **chemical** companies, AMA, ADA, they are for profit **industry**, it is in their best interest that you stay **sick**, **because** if you get well they **lose** a patient. When one **disease**, like Parkinson generates 25 billion dollars for products and services each year plus get government grants of 75 million, why would they want to find a cure.

**Dr. Linus Pauling said "everyone** should know the war on cancer is a fraud", He won two Nobel prizes to prove that nutrition plays a role in the bodys ability to cure disease. So why does the average medical school teach on average of 3 hours of nutrition and 7 of the top 10 deaths are nutrition related according to the surgeon general. The cattle, egg, dairy, cosmetic industry have been lying to the AMERICAN people and making billions of dollars. When growth hormones, anti **biotics**, pesticides, parasites are in thier products its easy to see why nobody is getting better. You would think the schools and hospitals would have the healthiest food, since they deal with young and sick people. Look at the many people who have complained about the food, being tasteless, devoid of any nutrition, sticky, smelly.

It's easy to see why you should support organic farming. 5 billions tons of pesticides are poured each year. The scientific data shows it may cause cancer, so why do we use pesticides, it is the big **petro** chemicals making billions of dollars and **they find research** to get the results they want. When I read that **Rep. Saxby Chambliss R-GA.**, quote about the House Budget Committee about wasteful government spending, he **said "We're** going to give the American people the opportunity to help us police every federal agency. I felt it was time to let you know what myself and thousands feel about natural health and conventional health. Senator Burt Saunders of Florida is pushing for harsher penalties for animal abuse. The first place were we should stop the animal abuse is Government **agencys** that abuse animals like the American Heart Association, American Cancer Association. People are fooled into giving money to these organizations which in return will buy more animals to abuse. The charities dance around with smoke and mirrors, seeing how long they can get billions of dollars from the Government and the American people. Its a great gimmick, but also a scam, so why do we need these Association & cause every likes big black tie charitable events. Its about **partys, clothing**, cars, jewelry, not about saving lives. It does cost a lot of money just to throw these events at places like the Ritz **Carlton**, they bring on the celebrities, alcohol, cigarettes, nutra sweet, soda, animal food, toxic water. I was at a breast cancer awareness luncheon, I could not eat or drink one thing **thier, everything** was prossessed, they even had sweet and low on the table. It even says right on the package this product will cause cancer and is hazardous to your health & at was funny to see, but it's sad we lost the fundamentals of common sense. When billion of dollars are on the line you would hope people do not peak behind the curtain and see the truth. The AMERICAN people should be aware that when they give money to the **AHA**, Bayer aspirin is also giving lots, Bayer aspirin also gave lots to Hitler and financed Auschwitz, along with **B.A.S.F. during WW1**. Its sad to see the AMERICAN people fooled and not told thier money goes with dirty money. Hold these companies accountable.

The health food industry are jumping on the bandwagon. I am Working at a health food store, I **see** new products coming out because people think that everything sold in a **health** food store is good for you. I have to look at the ingredients before I buy about 30% of goods is not **healthy** and

should not be consumed. The new word is functional foods, that is also misleading and natural companies are taking **advantage.** Bottom line any label that has the word veggie cannot have any animal in it. when I see the word veggie or vegetarian on the label; it Will contains eggs, and or dairy. A vegetarian is one that does not animal, we eat plants, hence the **name.** The UNITED STATES pharmacopoeia (**USP**) states that if product looks similar under the microscope we can **call it** of the vitamin E comes from Eastman Kodak Co. B vitamins from coal tar and **petro-chemicals,** vitamin D from radiated oil. The largest vitamin manufacture is Hoffman-Laroch, they do not sell anything **natural,** and they were fined almost a billion dollars in a vitamin scandal. The Pharmaceutical companies knows 33 billion dollars are spent each year on alternative medicine, they cant stop the growth, they are buying the manufactures, so they can have control alternative medicine.

No Government Legislation should prevent a family from self-treating.

No Government Legislation should coerce vaccinations or immunization.

Reduce and eliminate all pesticides, herbicides, chemical fertilizers.

Remove the **UNITED STATES** out of the UNITED NATIONS.

Marijuana is a plant, not a drug it should be legal.

Stop funding animal research.

Stop funding **cancer** and disease research.

Clean the chemicals out of the water.

**Educate prevention** of disease, not detection.

Promote' exercise.

Promote' organic vegetarian diet..

Save the forest and natural resources.

Stop the misleading **adveristing,** using celebrities as puppets.

Stop all cancer and disease charities.

Promote recycling.

Promote bicycle friendly roadways.

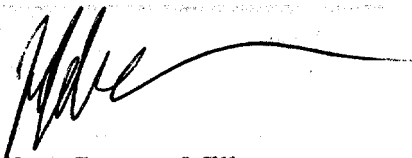

Put genetically altered ingredients on the label.

Restructure the FDA, USDA, NIH, EPA, they are suppose to protect the AMERICAN PEOPLE, they are not doing their paid jobs. Voting AMERICANS are getting educated and will not take this abuse any more.

please support a natural UNITED STATES.

Your reply would be greatly appreciated,

Thank you for your time and energy

This letter has been sent to every member of Congress.

June 1, 1999

Dear - ,

Last week, **Time**, the New **York Times**, **USA Today**, **Good Morning America** and most major media outlets across the US **carried** the news that Monarch butterflies died unexpectedly from eating milkweed plants which had been dusted with the pollen of genetically engineered **Bt** corn. This finding is the most recent of many **unwanted** and **unintentional** side effects from genetically engineered foods.

In every corner of the world, at every level of society, scientists, clergy, physicians, farmers, government leaders and citizens are raising a warning against the introduction of genetically engineered organisms into our food **chain**. Yet here in America, our government insists this technology is safe.

If it's safe, why is the British Medical Association calling for a moratorium on commercial transgenic plantings? Why is the European food industry demanding segregation and labeling of genetically engineered products? Why is the Pope warning of ethical implications? Why is Austria fighting to be a biotech-free zone? And why are 1,300 **schools** in the United Kingdom banning these foods from their **cafeterias**? Do they know something about genetic engineering that we don't? Are they paying attention to something we are ignoring? **And if so, why?**

In less than three years, more than 25% of our corn, 35% of our soybeans and 50% of our cotton crops have been genetically engineered. Already at least 60% of the foods in our grocery stores contain some genetically engineered component. Within 5 - 10 years the biotech industry intends to genetically engineer all of our **food**.

Why are we in such a rush? Forty years ago DDT was thought to be a safe and promising addition to agriculture. Thalidomide was given to pregnant women by their doctors. Nuclear power was touted as the cleanest energy source on earth. Marketed prematurely, each of these technological innovations brought unforeseen, unwanted and tragic side **effects**—which could have been so easily avoided through long-term safety testing. Well, we're doing it again. Genetically engineered foods are being rushed into the market without proper long-term testing. But the problems that could ensue from the genetic manipulation of our food make even 10,000 years of radioactive waste seem insignificant. Haven't we learned anything from our mistakes?

We are a vital and creative country. We move quickly and enthusiastically when science opens doors to new frontiers. Our love of progress, our vision of possibilities for life is a cornerstone of our nation's greatness. But allowing the glamour of a new discovery to overshadow sound judgment, giving ourselves permission to flood our fields with experimental organisms, which once released can never be recalled, is not only an extremely foolish misuse of science, it's irresponsible. And to conscript the American people into this experiment-without their knowledge or **consent**—to put these foods on the shelves of our grocery stores without labels—is not only un-American, it's unconscionable. This technology is so powerful that caution is absolutely called for. It's just common sense.

On June 17, on behalf of the Consumer Right to Know Campaign, we will submit several hundred thousand signatures on a petition calling for the mandatory **labeling** of genetically engineered foods to the President, Congress, USDA, FDA, and EPA. I invite you to attend the presentation of these petitions and accept them on behalf of the people of your state. At this presentation, you will hear the considerable concerns of scientists and physicians, farmers, religious leaders, American and European food industry members, and consumers. And when you do, you will recognize that genetic engineering demands your serious and immediate attention.

I urge you to step forward to safeguard the future for all of us.

Sincerely,

Laura Ticciati  
Executive Director

## COOKING (esp. Microwave) & PROCESSED FOOD

Loss of vitamin & (trace) mineral availability  
Creation of indigestible proteins & fats  
Destruction of enzymes  
Loss of oxygen

## MEAT, FISH, DAIRY & POULTRY

Extensive hormones & antibiotics  
Parasites, bacteria, viruses & worms  
Concentrated pesticides  
Excess protein & 'fat'  
Little to no fiber

## INORGANIC VEGETABLES & FRUITS

High pesticides  
Low trace minerals & vitamins  
High sugar through hybridization  
Bacteria, viruses & parasites

YOU

## THE CHEMICAL & PHARMACEUTICAL INDUSTRIES

Disruption of body energy circuits • Erosion of tissue • Suppression of cell development  
Attack on T-, H-, and white blood cells • Disorganization of metabolic processes
